Lumen Learning: What We Do

Every student deserves to experience the joy—and power—of learning.

We work to make this possible by replacing expensive textbooks with low-cost digital courseware designed to strengthen learning, using open educational resources (OER).

What's different about Lumen?

We've grown up in the open education community, finding ways to make it simple to use OER content to strengthen teaching and learning.

We offer:

- **OER course materials** for 50+ general education subjects
- **Interactive learning activities,** assessments, videos, and other content to engage students in learning
- **Content that gets better and better** at supporting learning through data-driven, continuous improvement
- **Seamless LMS integration** for Canvas, Blackboard, D2L Brightspace, and Moodle
- **Awesome support** to guide faculty through a smooth transition to reliable, secure courseware

Boost Affordability and Student Success

Grounded in learning science as well as open content, Lumen courseware simultaneously reduces textbook costs and improves the quality of learning. It shows in student outcomes like quiz scores, course completion, and passing rates.

Research: More students persist and pass Waymaker courses

METRIC	CONTROL	WAYMAKER
DROP	34%	10% ←
WITHDRAW	9%	10%
C OR BETTER	92%	91%
THROUGHPUT*	55%	73% ←

*Throughput is the percentage of students enrolled on the first day of class who successfully pass the course. See reverse for learning data detail.

Comrades in the Cause

Don't take it from us. Listen to people who've used Lumen courseware.

When students engage with the material, it gives them a lot of feedback. It's like having a mentor right there with you. Metacognitively, it does what we all hope our students would do.

Each page models the process of learning for students, to help them become better learners as they use the material.

KATHERINE CAMERON

Associate Professor of Psychology
Coppin State University

Our arrangement with Lumen Learning is not a traditional vendor-customer relationship.

Instead, it feels like we are both part of a fundamental shift towards a future where faculty have greater control over how course materials support student learning.

JASON PICKAVANCE

Director of Faculty Development & Educational Initiatives
Salt Lake Community College

OHM is very intuitive and so easy for students and faculty to use. And of course, we love to save money for our students.

ANN SCHNURBUSCH

Math Instructor
Southeast Missouri State University

My [student] success rates have gone up approximately 13% since switching from paid textbooks to Lumen OER content for Introduction to Statistics.

DAVID USINSKI

Associate Professor and
Department Chair of Mathematics
Erie Community College

Learning Data Detail: Analysis includes 3889 students at Cerritos College during spring, summer and fall terms 2016. 1869 were in sections taught with several different Waymaker courses, and 2020 were in "control" sections of the same courses using commercial publisher or OER alternatives.
